ConsumerPowerline, a strategic energy asset management firm, has been selected by **Central Vermont Public Service Corp.** as its provider of demand-response solutions to its electricity customers in the area affected by the Coolidge Connector project. The connector is the installation of a second 51-mile, 345-kilovolt transmission line next to the existing line that runs between Vernon and the Coolidge Substation in Cavendish. ConsumerPowerline will be the sole demand response provider for CVPS through May 2011 to bridge reliability concerns until the Coolidge Connector line can be built.
